

Program to calculate Gross Salary

```
#!/bin/sh  
echo "Enter you basic salary"  
read sal  
da=`expr $sal \* 20 / 100`  
hra=`expr $sal \* 30 / 100`  
grossSalary=`expr $da + $hra`  
echo "Gross Salary = $grossSalary"
```

The screenshot shows a terminal window titled "Ubuntu 20.04 [Running] - Oracle VM VirtualBox". The terminal interface includes a menu bar with "File", "Machine", "View", "Input", "Devices", and "Help". Below the menu bar is a toolbar with "Activities", "Terminal", and a clock showing "Sep 29 15:52". The terminal content shows the execution of a shell script named "unixLabPrg1.sh". The prompt is "snehita@snehita-VirtualBox: ~". The script prompts for "Enter you basic salary", and the user enters "1000". The script then outputs "Gross Salary = 500". The prompt returns to "snehita@snehita-VirtualBox: ~\$".

```
snehita@snehita-VirtualBox: ~$ sh unixLabPrg1.sh  
Enter you basic salary  
1000  
Gross Salary = 500  
snehita@snehita-VirtualBox: ~$
```
